₹264M

March 2023

THE BUSINESS

Before We Explain the Spike — Here's What We Were Looking At.

Shield Insurance · 5 Cities · 4 Channels · 26,800 Customers · 6 Months

5

CITIES

4

CHANNELS

26.8K

CUSTOMERS

6

MONTHS

Period: Nov 2022 – Apr 2023

Tools: Power BI · DAX · Executive Dashboard Design

4 Analytical Lenses: Executive Pulse · Risk Exposure · Channel Intelligence · Customer DNA

Central Question: "Are we growing sustainably — or just getting lucky?"

3 / 11

REVENUE PULSE · ACT I

For Four Straight Months, the Business Was Predictably Flat.

Stable. Consistent. Almost boring.

Revenue moved in a **₹132M–₹156M band**. Customers held at **3.8K–4.0K per month**. Nothing suggested what was coming.

REVENUE PULSE · ACT II

Then March Arrived. ₹264M. 7,100 Customers. Nothing Like It Before.

*"But the real question wasn't what happened in March. It was **what happened next.**"*

REVENUE PULSE · ACT III

April Revenue Fell 41.7%. The Market Asked: Collapse — or Correction?

REVENUE

₹154M

↓ -41.7% MoM

CUSTOMERS

4,100

↓ -41.4% MoM

POLICIES SOLD

4,149

↓ -41.4% MoM

SETTLEMENT RISK

60.6%

◇ -0.3% MoM

Three metrics collapsed. One didn't — **settlement risk**. Business volume dropped. Risk exposure *stayed*.

April's ₹154M still **exceeded every single pre-March month**. This was normalization, not deterioration.

6 / 11

GEOGRAPHIC LAYER

Pull One City Out — and the Revenue Story Changes Completely.

Delhi NCR isn't just the top city. It's holding up **40.6%** of the entire business.

Top 2 cities (Delhi NCR + Mumbai) = **₹642M** = **64.9%** of total revenue

Chennai & Indore: consistent demand, currently **underpenetrated**

RISK EXPOSURE LAYER

The Older the Customer — the Less the Business Actually Earns.

Settlement risk doesn't distribute evenly. It follows age — and it escalates sharply.

APR TOTAL REVENUE

₹153.75M

SETTLEMENTS PAID

-₹93.11M

NET REVENUE · MARGIN

₹60.64M · 39.4%

For every ₹1 collected — only ₹0.39 kept.

8 / 11

One Channel Fell Half as Hard — and Matched It on Revenue Per Customer.

Online channels were quietly outperforming. Nobody had made it a priority.

● ONLINE

Apr Revenue	₹75M
Apr Share	48.6%
MoM Decline	-25.5%
Rev / Customer	₹37,160

● OFFLINE

Apr Revenue	₹79M
Apr Share	51.5%
MoM Decline	-51.6%
Rev / Customer	₹36,970

Offline fell **2x as hard**. Online held the floor with the **same revenue/customer**.

Online = only **28.7%** overall adoption — yet **nearly reached parity in April**.

9 / 11

So — Was March a Fluke, or a Signal?

- 1 Identify the **March growth driver** — campaign, seasonal, or channel-led? Replicate if possible.
- 2 Double down on **online channels** — equal revenue/customer (₹37.16K) with 2× better resilience.
- 3 Expand into **secondary cities** — Chennai (₹106M) and Indore (₹81M) show consistent demand.
- 4 Segment **underwriting by age** — risk climbs from 39% to 72%; product pricing must reflect this.
- 5 Build a **post-peak acquisition pipeline** — acquisition fell from 7.1K to 4.1K in a single month.
